

Roundscan Promotion 2017

Combined form and roughness measurement with the fastest form measuring instrument in its class.

Our customers have confirmed that the **Roundscan** measures faster than comparable devices thanks to the **TwistLive® quick measuring method**: Form, roughness and twist are measured in a single measurement run with significant time savings. For twist measurements, this saving may be as high as 75%. Here are some quick highlights:

- **CNC-controlled MDS4 rotation and tilt module** for rapid measurements at any point on the workpiece
- **Fast delivery.**
- **Trade in** your old measuring system.

Already made up your mind? Your customer advisor or responsible branch can draw up a quick and attractive quotation for you.

Valid until 31.12.2017.

F435/455 Promotion 2017

Form measuring instruments for fully automatic measurement of all form and position tolerances.

The **F435** and **F455** form measuring instruments are used for precision measurement of the roundness, cylindricity and flatness of your workpieces. These are just some of the advantages of our form measuring instruments:

- High degree of automation through **automatic workpiece alignment** and **CNC-controlled measuring axes**.
- For demanding **measuring tasks in series production** as well as for **use in the measuring room** with frequently changing measuring tasks
- **Short delivery times**
- **Trade in** your old measuring system.

To receive an attractive quotation, please contact your customer advisor or your responsible branch.

Valid until 31.12.2017.
